

I. OBJECTIVE

The programme is designed to enable highly qualified, top-level researchers to conduct research for up to two years at a non-university research institute. These institutes should mainly be based in Berlin, but a host institute outside of Berlin that already has a close relationship with Berlin research institutes may also be selected. The goal is to strengthen medium- and long-term cooperation between the university and the institute hosting the researcher. Whilst conducting independent research at an institute, the researcher will be given leave of absence by his or her university. Junior researchers who are qualified to hold professorships will have the chance to substitute for these professors, thereby driving their own professional profile in Berlin.

II. ELIGIBILITY

Tenured professors at the four Berlin universities (FU, HU, TU, UdK) and the Charité-Universitätsmedizin, who are eligible to take a research sabbatical, may apply. Please note that the Einstein Foundation cannot cover the costs of providing replacements during regular state sabbaticals.

III. FUNDING

For the duration of his or her stay at the host institution, the visiting researcher will be awarded the title of "Einstein Research Fellow."

Support may be granted in the form of

- funding to enable a junior researcher who is qualified to hold a professorship to serve as a temporary replacement for a W2/C3 or W3/C4 professor or
- funding for staff and material resources (up to 6,000 Euro for approx. six months) for the junior researcher to prepare his or her own grant applications.

The Einstein Foundation cannot provide funding for the Einstein Research Fellow's work at the non-university research institute.

IV. FUNDING PERIOD

The maximum funding period is two years.

V. APPLICATION PROCESS

Applicants are required to use the application forms provided by the Einstein Foundation. Applications may be submitted in any discipline by the dates posted on the Foundation's website.

Applicants must be professors at one of the respective institutions. Applications should be accompanied by a statement from the head of the university or the Charité-Universitätsmedizin. If individual host institutions have internal deadlines for applications to

the Einstein Foundation, applicants should liaise with the contact person at their institution (a list is included below) well in advance.

The head of the university or the Charité-Universitätsmedizin must commit to allowing a junior researcher to serve as a replacement for the professor.

The application for funding must include:

- A description of the project
- An explanation of the role the project will play in promoting medium- and long-term cooperation between the university and the non-university host institute
- The nomination of a substitute professor with CV
- An outline of the proposed substitute's outstanding scientific qualifications
- An assessment of the proposed substitute's medium- to long-term career prospects
- A cost plan

Apart from the overarching criterion of academic excellence, the project's importance for Berlin as a centre of research excellence plays a crucial role in the evaluation of all applications.

VI. USE OF FUNDS

The approved funds may only be drawn through the universities or the Charité-Universitätsmedizin in accordance with the regulations on third party funding. These institutions will also become the employers of the individuals who receive support from the Einstein Foundation Berlin.
